DETAILED ACTION

Claim Rejections - 35 USC § 103

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1-7 are rejected under 35 U.S.C. 103(a) as being unpatentable over Hale et al. (5,343,382) in view of Ashley et al. (5,245,261).

Hale et al. disclose the claimed invention except for conductive plate and insulation. Hale et al. disclose an adaptive current control circuit in Fig. 1. DC motor 20, MOSFET's 22, 24, 26 and 28 in a full H-bridge configuration. Ashley et al. teach for the use of conductive plate and insulation for transistors in Figs. 2-6. It would have been obvious to one having ordinary skill in the art at the time of the invention to provide a conductive plate and insulation as taught by Ashley et al. in Hale et al. circuit in order to protect the circuit from heats-up due to the heat conduction from the load.

3. Claims 1-7 are rejected under 35 U.S.C. 103(a) as being unpatentable over Baker (6,445,530) in view of Ashley et al. (5,245,261).

Baker discloses the claimed invention except for conductive plate and insulation. Baker discloses a class AB H-bridge using current sensing MOSFETS in Fig. 10. DC load 152, MOSFET's 200 in a full H-bridge configuration and Driver circuit 206. Ashley et al. teach for the use of conductive plate and insulation for transistors in Figs. 2-6. It

would have been obvious to one having ordinary skill in the art at the time of the invention to provide a conductive plate and insulation as taught by Ashley et al. in Baker circuit in order to protect the circuit from heats-up due to the heat conduction from the load.

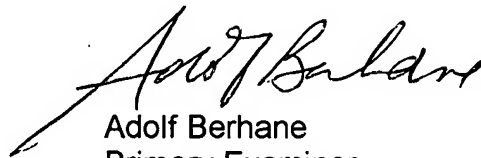

Response to Arguments

4. Applicant's arguments with respect to claims 1-7 have been considered but are moot in view of the new ground(s) of rejection.
